

GAS DETECTOR REFERANCE MANUAL

MODEL: EW-412 (LNG.LPG)

[NOTICE]

- Surely be aware of the specifications by skilled worker prior to using the product.
- Surely keep the specifications to where you are always able to see.

[CONTENTS]

- 1. SPECIFICATIONS
 - 1-1. INDICATOR
 - 1-2. SENSOR
- 2. PART & FUNCTION
 - 2-1. INDICATOR
 - 2-2. SENSOR
- 3. COMPOSITION
 - 3-1. INDICATOR
 - 3-2. SENSOR
- 4. OPERATIONAL SYSTEM
- 5. INSTALLATION
 - 5-1. Where to install

- 6. INSTRUCTION & CAUTIONS
- 7. DIMENSIONS

1. SPECIFICATIONS

1-1. INDICATOR

Model	Gas Leak Detector EW-412	
Detectable Gases	LPG, LNG, City Gas, Combustible Gas	
Power supply	AC 220V. 60Hz	
Power consumption	Normal condition - 5W	
Operating Temperature &Humidity	0°C ~ 40°C, Below 95%(RH)	
Detection Range	0 ~ 100% LEL	
Alarm point	Combustible gas- below 25% LEL (The set point is 18% LEL now)	
Response time	Within 20 sec	
Concentration display	3 FND 10 LED bar	
Visual & audible Alarm	Yellow LED blinking, Buzzer Sound (above 70dB)	
Operating	Green LED	
Fault	Yellow LED, buzzer sound (short sound)	
Battery	Ni-Cd storage battery DC 12V 600m Ah	
Warm up Time	about 1 min.	
Cabling	VCT,CVVS (above 0.75mm)	
Dimensions	144*258*86mm	
Output	DC 12V (20~30mA). Dry contact (COM.NO.NC)	
Relay contact	AC 220, 1A	
Weight	about 2,080g	

1-2. SENSOR

Model	EW EX П В 100	
Detectable Gases	LPG, LNG, City Gas, Combustible Gas, Toxic Gas	
Detection Technique	Catalytic combustion, diffusion	
Operating Temperature & Humidity	-20°C~50°C. below 95% (RH)	
Explosion-Proof	Exd II BT6	
Conduit entry	16mm inside diameter, 23mm outside diameter	
Detection range	0~100%(LEL)	
Dimensions /Weight	140*142*75 mm. 858g	
Response time	within 20 sec	

2. PART & FUNCTION

2-1. INDICATOR

- ①LED dot display: It displays the concentration of gas on LED dot display
- ②Power light: Green LED is lit while Supplied by AC 220V
- ③Battery warning light YELLOW LED gets lit when battery has troubles or It is disconnected or its fuse has blown. Or it is switched off
- ④ Power test button: When the power

 Test button is pressed, the reserve Power LED

 Turns on, and the alarm Operates with the

 Reserve power.
- ⑤Test button: It allows the user to Check the

circuit of the UNIT Panel. If it is pressed, the concentration of gas, as if gas is detected actually. And if the concentration exceeds the alarm point the audible alarm beep
(a) Warning light(ALARM): Yellow LED blinks when gas is detected, eliminated in normal condition

- Digital display: It displays the concentration of gas on 7segement display
 - : If the concentration exceeds the point and the value of the concentration is maintained For several seconds, it displays letter GAS and the value of concentration by rotation (If the concentration keeps changing the changing value of concentration is displayed only)
- ®Redundant power warning light: Turns on when the battery power is abnormal (Fuse break, Battery discharge)
- (1) Fault light (ERROR): It gets lit when the fuse for the sensor has blown. Or the connection Wire between the sensor and the indicator is connected or short-circuited. Or the sensitivity of the sensor has been lost
- ① Buzzer Attention Lights: Buzzer Attention lights blinking is a warning sign that a buzzer sound does not sound due to an alarm. The buzzer attention indicator can be initialized with the buzzer stop button. (Buzzer can only be stopped when a gas leak alarm ccurs.)
- ②Alarm mute button: If allows the user to silence the buzzer when it's alarm condition.

 If pressed one time, buzzer becomes mute. And pressed again, Buzzer becomes audible gain

- ① Sticker (Explosion proof)
- ② Sensor cover
- 3 Sensor body
- Explosion proof approval sticker (Korea gas safety corporation approval)
- (Wrench bolt M5x15)
- 6 Sensor fixing hole: The hole for fixing the detector by bolts or nails
- 7 Sensor protection filter: Sensor protection filter (bronze 300mesh)
- (8) Ground earth: M4x6mm

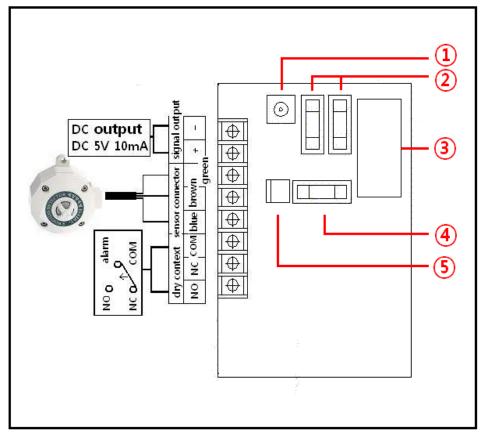

Hexagonal headed bolt and packing

Hexagonal headed bolt and packing cannot be used in the areas that require explosion-proof

3-1. INDICATOR

①Power switch: AC power supply switch

②AC FUSE (2EA): 220V 1A glass tube

(When it has blown, RED warning light of the fuse gets lit)

③BUZZER: It makes audible alarm

Spare power fuse: 250V 2A fuse (in case of fuse break, the front preliminary warning light turns on)

⑤Spare power connection connector

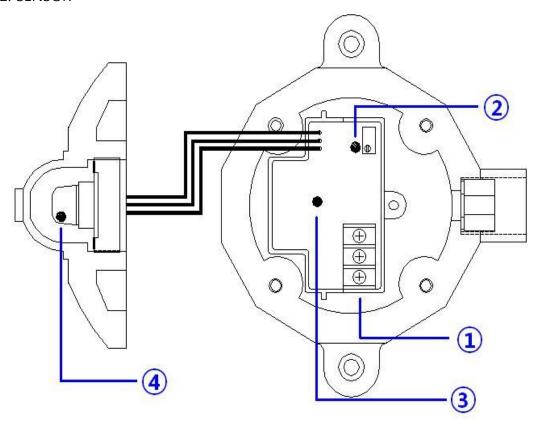

WIRING DIAGRAM

- AC 220V input terminal: Please connect with rated voltage (AC 220V)
- Dry contact (NO NC COM): In normal condition, COM terminal is connected with NC terminal. And in alarm condition. COM terminal is connected with NO terminal
- Sensor connector (terminal block): Please match the wire with terminals in color

Blue (White) +	Brown (Black)-	Green (Wire of signal)
Power supply of sensor +	Power supply of sensor –	Output of Sensor
(DC 24V)	(DC 24V GND)	(4~20mA)

- Alarm output terminal: These terminals are used when the indicator outputs the Alarm signal to the control panel and others (DC 12V 20mA)

3-2. SENSOR

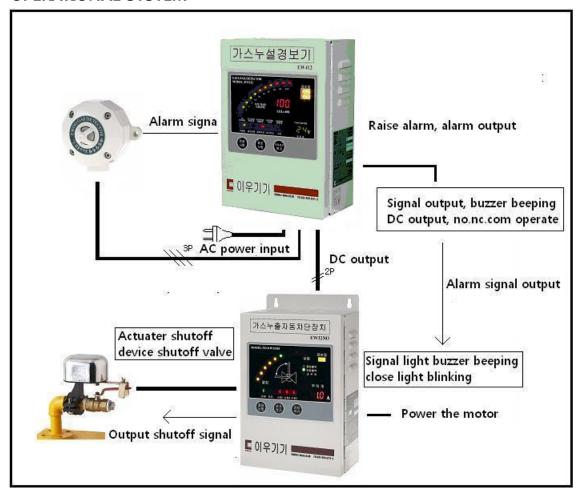

① Connector (terminal block)

Blue (White) +	Brown (Black)-	Green (Wire of signal)
Power supply of sensor +	Power supply of sensor –	Output of Sensor (4~20mA)
(DC 24V)	(DC 24V GND)	

- ② Zero calibration: We release the detector with it being set. (No arbitrary adjustment)
- ③ Concentration light: The brightness of yellow light changes in proportion to the Concentration of gas (eliminated in normal condition)
- 4 Power supply light: Green LED is lit while supplied with power

4. OPERATIONAL SYSTEM

5. INSTALLATION

5-1. Where to install

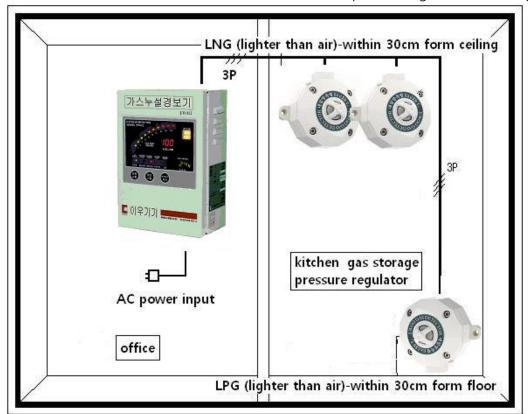

- ① The detector is designed to be installed in the area that is subject to expose to gas or the area where the leaked gas tend to stay.
- ② Please determine the location of the sensor considering the kind of the Gas, cautions and condition.
- ③ If you are to detect the gas that is heavier than air, sensor be mounted at Floor or the wall within 30cm from floor, and if you are to detect the Gas that is lighter than air, sensor should be mounted at the ceiling or The wall within 30cm from ceiling

(Plus: sensor should be farther than 1m and within 4m from the gas appliance)

Please install the detector at the place that the audible alarm is able to be Heard so that manager can take follow-up measures.

5-2. Installations drawing

* PLACE TO INSTALL: kitchen, Boiler room, Room of pressure regulator, Gas storage

6. INSTALLATION & CAUTIONS

6-1. INSTRUCTION

- ①Please open the case and connect the sensor with the indicator. And connect the AC 220V power supply as well.
- ②Please turn on the power supply switch and wait for warm up time 1(minute) in 1minute, the detector begins to operate.
- ③ Fault light (ERROR) on the UNIT panel gets lit when the fuse for the Sensor has blown or the connection wire between the sensor and The indicator is disconnected or short-circuited. Or the sensitivity of The sensor has been lost.
- ④If you are to test the operation of the detector, please press the test Button on UNIT panel, Then the concentration increases as if gas Is detected actually. And if the level exceeds the alarm pint, the Detector makes visual and audible alarm.
 - ⑤If you want to stop the audible alarm, please press the alarm mute

- Button (B/Z stop) If you do, alarm mute warning light (B/Z Stop) blinks And the audible alarm becomes mute.
- 6 When the fault light gets lit, please check the connection between Sensor and indicator.

6-2. CAUTIONS

- 1. Do not attempt to disassemble, repair, remodel or convert.
- 2. If you purchase the product which has earth terminal, please install an earth wire.
- 3. Do not touch the power cord or main body with wet hand.
- 4. Do not disturb the ventilation of the Sensor
- 5. Be careful not to damage the power cord.
- 6. Be cautious about using the silicon glue which could affect the Sensor. Silicon glue could cause malfunctioning.
- 7. Please use the rated voltage (AC 220V) written on the product.
- 8. Do not spray the Sensor directly with air freshener, insecticide, hair spray etc.
- 9. Please use standard gas when testing.
- 10. Please connect Indicator with same Sensor in serial number.
- 11. Do not use for the gas that is not target one.
- 12. Please check the sensing device more than once a year.
- 13. Areas to avoid 1.Near drafts caused by heating, ventilating, fans and doors
 - 2. Near vapor, steam, exhaust gas, dust, strong wind and other gases
 - 3. Areas of high heat and humidity.

7. Dimensions
